

TOUGHPOWER PF3 1200W / 1050W / 850W / 750W

English

Warnings and Caution

- Do not unplug the AC power cord when the power supply is in use.
- Doing so may cause damage to your components.
- Never pull the power supply in high ambient and/or temperature environments; the power supply will be damaged.
- High voltage exists in the power supply. Do not open the power supply unless you have an authorized service technician or high temperature equipment.
- Doing so will void the warranty.
- The power supply should be powered by the source indicated on the rating label.
- Particular caution is advised when connecting power cables. Third party cables may not be compatible and could cause serious damage to your system and power supply. The warranty is voided if the damage is caused by third-party cables.
- The warnings on graphics are located on the labels.
- Please only use genuine Thermaltake modular cables with Thermaltake connections which can handle the power supply's wattage and voltage rating.
- Third party cables may not be compatible and could cause serious damage to your system and power supply. The warranty is voided if the damage is caused by third-party cables.
- All the warnings on graphics are located on the labels.
