Gigaset HX – the universal handset

With your Gigaset HX handset, you have purchased a high-quality, multifunctional and future-proof device.

You can use your handset with several different DECT bases.

On a Gigaset base

Connect your HX handset to a Gigaset base and use the many features with the quality you would expect from Gigaset.

If your Gigaset base is IP-compatible, you can also make broadband calls using your HX handset with the highest voice quality (HDSP).

In this guide, all functions that are available for your HX handset are detailed/described.
The complete functionality with Gigaset bases is described in the guide relevant to your Gigaset system.

All Gigaset user guides can be found at ➡ www.gigaset.com/manuals

On a DECT/GAP telephone or router from another manufacturer

The handset also functions with DECT/GAP telephones from other manufacturers, of course, as well as DECT routers. Additional information can be found at
➡ www.gigaset.com/compatibility.

On DECT routers with CAT-iq 2.0/2.1

Your Gigaset HX handset is certified in accordance with the DECT/CAT-iq 2.0/2.1 standard. As a result, operation with a DECT router with CAT-iq functionality is possible.

Handset functions on a CAT-iq router (amongst others):

- full access to the central directory on the router as well as the local directory integrated in the handset,
- convenient calling and using of call lists,
- using several lines and call numbers (the relevant scope of the function is dependent on the country, network and router),
- enjoy excellent audio quality (certified HD-Voice™ quality).

➡ Details can be found in the relevant user guide for your router.

Additional information regarding your HX handset can be found at ➡ www.gigaset.com/hx

Safety precautions

	Read the safety precautions and the user guide before use.
	The device cannot be used in the event of a power failure. In case of a power failure it is also **not** possible to make **emergency calls**. If the LAN or Internet connection is down, functions that require an Internet connection are not available, such as Internet telephony (VoIP), online directories and the Info Center. Emergency numbers **cannot** be dialled if the **keypad/display lock** is activated!

	Use only **rechargeable batteries** that correspond to the **specification** (see list of permitted batteries ➡ www.gigaset.com/service). Never use a conventional (non-rechargeable) battery or other battery types as this could result in significant health risks and personal injury. Rechargeable batteries, which are noticeably damaged, must be replaced.
	The handset must not be operated if the battery cover is open. Ensure that the batteries can not be short-circuited by objects in the battery compartment.
	Do not use the devices in environments with a potential explosion hazard (e.g. paint shops).
	The devices are not splashproof. For this reason do not install them in a damp environment such as bathrooms or shower rooms.
	Use only the power adapter indicated on the device. Whilst charging, the power socket must be easily accessible.
	Remove faulty devices from use or have them repaired by our Service team, as these could interfere with other wireless services.
	Do not use the device if the display is cracked or broken. Broken glass or plastic can cause injury to hands and face. Send the device to our Service department to be repaired.
	Do not hold the rear of the handset to your ear when it is ringing or when speaker mode is activated. Otherwise you risk serious and permanent damage to your hearing. The phone may cause interference in analogue hearing aids (humming or whistling) or cause them to overload. If you require assistance, please contact the hearing aid supplier.
	Keep small cells and batteries, which can be swallowed, out of the reach of children. Swallowing a battery can lead to burns, perforation of soft tissue and death. Severe burns can occur within 2 hours of swallowing. In the case of a swallowed cell or battery, seek medical care immediately.
	Using your telephone may affect nearby medical equipment. Be aware of the technical conditions in your particular environment, e.g. doctor's surgery. If you use a medical device (e.g. a pacemaker), please contact the device manufacturer. They will be able to advise you regarding the susceptibility of the device to external sources of high frequency energy (for the specifications of your Gigaset product see "Technical data").

Getting started

Contents of the package

- One **handset**, one battery cover, two batteries, one charging cradle with power adapter, one belt clip
- 1 x user guide

> The charging cradle is designed for use in closed, dry rooms within a temperature range of +5°C to +45°C.
>
> Never expose the telephone to heat sources, direct sunlight or other electrical devices.
>
> Protect your telephone from moisture, dust, corrosive liquids and vapours.
>
> The device's feet do not usually leave any marks on surfaces. However, due to the multitude of different varnishes and polishes used on furniture, contact marks on the surfaces cannot be completely ruled out.

Connecting the charging cradle

▸ Connect the flat plug of the power adapter 1 .

▸ Plug the mains unit into your power socket 2 .

To remove the plug from the charging cradle again:

▸ Disconnect the power adapter from the mains power supply.

▸ Press the release button 3 .

▸ Remove the flat plug 4 .

Setting up the handset for use

The display is protected by a plastic film. ▶ **Please remove the protective film!**

Inserting the batteries

⚠ Only use **rechargeable batteries** since otherwise major health risks and injury may result. For example, the outer casing of the batteries could be destroyed or the batteries could explode. The device could also malfunction or be damaged as a result of using batteries that are not of the recommended type.

▶ Insert the batteries (for correct +/- direction, see diagram).

▶ Fit the battery cover from the top.

▶ Press the cover until it clicks into place.

To re-open the battery cover:

▶ Insert a fingernail behind the notch at the top of the cover and slide it downwards.

Attaching the belt clip

The handset has notches on each side for attaching the belt clip.

• Attaching the belt clip: ▶ Press the belt clip onto the back of the handset so that the tabs on the belt clip click into place in the notches.

• Removing the belt clip: ▶ Press the centre of the belt clip firmly with your right thumb. ▶ Push the nail of your left thumb up between the clip and the casing. ▶ Slide the clip upwards to remove.
Charging the batteries

▸ Charge the batteries fully prior to first use in the charging cradle.

The batteries are fully charged when the power icon ⚡ disappears from the display.

$$⚡\square\ +\ \bigcirc\!\!\!\!\!\text{8 h}\ =\ ▬$$
> Batteries may heat up during charging. This is not dangerous.
>
> After a time, the charge capacity of the battery will decrease for technical reasons.

Changing the display language

You can change the display language if the phone is set to a language not required.

▸ Press the centre of the control key ▬.

▸ Press the keys 6 and 5 **slowly** and successively . . . the language settings display appears, the set language (e. g. **English**) is highlighted (⊙ = selected).

▸ To select a different language: ▸ Press the control key ⬍ until the desired language is highlighted on the display, e. g. **Francais** ▸ press the key on the right directly underneath the display to activate the language.

▸ To revert to idle status: ▸ Press and **hold** the End call key 🔴

Baby monitor

When the baby monitor is switched on, the stored (internal or external) destination number is called as soon as a defined noise level is exceeded in the vicinity of the handset. The alarm to an external number is cancelled after approximately 90 seconds.

You can answer the alarm using the **Two Way Talk** function. This function is used to switch the loudspeaker of the handset located in the baby's room on or off.

In baby monitor mode, incoming calls are only indicated on the display (**without ringtone**). The display backlight is reduced to 50%. Advisory tones are deactivated. All keys are locked, with the exception of the display keys and the centre of the control key.

If you accept an incoming call, the baby monitor mode is suspended for the duration of the call, but the function **remains** activated. The baby monitor mode is not deactivated by switching the handset off and on again.

The handset should be positioned 1 to 2 metres away from the baby. The microphone must point towards the baby.

Activating the function reduces the operating time of your handset. For that reason, place the handset in the charging cradle if necessary.

The baby monitor is activated 20 seconds after switching on.

The microphone of the handsfree device is always used, even if a headset is connected.

The answer machine for the destination number must be switched off.

After switching on:

▸ Test sensitivity.

▸ Test the connection, if the alarm is being forwarded to an external number.

ECO DECT

(depending on the base)

The device range is set to maximum as default. This guarantees the best connection between the handset and the base station. In idle status, the handset will not function (as it is not transmitting). Only the base station will maintain contact with the handset via a low wireless signal. During a call, the transmission power automatically adapts to the distance between the base station and handset. The smaller the distance to the base, the lower the radiation.

To reduce the radiation further:

▶ ■ ▶ 🔲 ⚙ **Settings** ▶ **OK** ▶ 🔼 **ECO DECT** ▶ **OK** ▶ **Maximum Range** ▶
Change (■ = deactivated)

The range is also reduced with this setting.

It is not possible to use a repeater to increase the range.

> this handset is de-registered, **No Radiation** will automatically be re-activated.
>
> The wireless connection will only be established for an incoming or outgoing call and
> the connection will be delayed by about 2 seconds.
>
> In order that a handset can establish a wireless connection with the base station more
> quickly for an incoming call, it must "listen" to the base station more often, i.e. scan the
> environment. This increases power consumption and reduces the standby and talk-
> time of the handset.

Handset update

The handset supports firmware updating via the DECT radio link to the base/router (SUOTA = Software Update Over The Air).

ⓘ The base/router to which the handset is registered must also support this function
(➔ www.gigaset.com/compatibility)

The phone checks whether new firmware is available for the handset. If it is, a message is displayed.

▸ Start the firmware update with **Yes**.

Testing DECT encryption

(depending on the base)

When this function is enabled, the handset tests whether the DECT connection to the base is secure, i.e. is encrypted. If not, a message is shown on the display.

▶ ■ ▶ 〖 〗 Settings ▶ OK ▶ 〖 〗 System ▶ OK ▶ 〖 〗 Security Check ▶ Change (☑ = enabled)

> ⓘ If a repeater without encryption is used, the secure connection test must be disabled.

If, on the base, encryption is disabled at a later time whilst the secure connection test is enabled (because a repeater needs to be connected for example), **Press 'info' to read security info** is shown on the handset.

▶ **Info** . . . the situation is explained ▶ **Sec. off** . . . the secure connection test is disabled

During a call

A sound and a message on the display indicate when encryption is disabled on the base during a call.

Continue call: ▶ **Yes**

Stop call: ▶ **No**

If neither is pressed, the call is stopped automatically after a certain time.

Testing the secure connection status during a call:

▶ Press the Hash key 〖# ↝〗 **for a longer time** . . . the secure connection status is shown on the display

Resetting a handset

Reset any individual settings and changes that you have made.

▶ ■ ▶ 〖 〗 Settings ▶ OK ▶ 〖 〗 System ▶ OK ▶ 〖 〗 Handset Reset ▶ OK ▶ Yes . . . the handset's settings are reset

> ⓘ The following settings are **not** affected by a reset
> - Registration of the handset to the base station

Manufacturer's advice

Authorisation

This device is intended for use worldwide. Use outside the European Economic Area (with the exception of Switzerland) is subject to national approval.

Country-specific requirements have been taken into consideration.

Gigaset Communications GmbH hereby declares that the following radio equipment types are in compliance with Directive 2014/53/EU and the Radio Equipment Regulations 2017:
S30852-S3051-xxxx, S30852-S3061-xxxx

The full text of the EU and UK declaration of conformity is available at the following internet address: www.gigaset.com/docs.

This declaration could also be available in the "International Declarations of Conformity" or "European Declarations of Conformity" files.

Therefore please check all of these files.

Data protection

We at Gigaset take the protection of our customers' data very seriously. It is precisely for this reason that we are ensuring all our products feature "Privacy by Design" as standard. All information we collect is used to make our products as good as possible. In the process, we ensure your details are protected and only used for the purposes of making available to you a product or service. We know which path your data takes through the company and ensure this happens in line with data protection specifications in a secure and protected manner.

The full text of the privacy policy is available from: www.gigaset.com/privacy-policy

Environment

Environmental management system

Gigaset Communications GmbH is certified pursuant to the international standards ISO 14001 and ISO 9001.

ISO 14001 (Environment): Certified since September 2007 by TÜV SÜD Management Service GmbH.

ISO 9001 (Quality): Certified since 17/02/1994 by TÜV SÜD Management Service GmbH.

Disposal

Batteries should not be disposed of in general household waste. Observe the local waste disposal regulations, details of which can be obtained from your local authority.

All electrical and electronic equipment must be disposed of separately from general household waste using the sites designated by local authorities.

If a product displays this symbol of a crossed-out rubbish bin, the product is subject to European Directive 2012/19/EU.

UK: The Waste Electrical and Electronic Equipment Regulations 2013.

The appropriate disposal and separate collection of used equipment serve to prevent potential harm to the environment and to health. They are a precondition for the re-use and recycling of used electrical and electronic equipment.

For further information on disposing of your used equipment, please contact your local authority or your refuse collection service.

Care

Wipe the device with a **damp** cloth or an antistatic cloth. Do not use solvents or microfibre cloths.

Never use a dry cloth; this can cause static.

In rare cases, contact with chemical substances can cause changes to the device's exterior. Due to the wide variety of chemical products available on the market, it was not possible to test all substances.

Impairments in high-gloss finishes can be carefully removed using display polishes for mobile phones.

Contact with liquid

If the device comes into contact with liquid:

1   Unplug all cables from the device.
2   **Remove the batteries and leave the battery compartment open.**
3   Allow the liquid to drain from the device.
4   Pat all parts dry.
5   Place the device in a dry, warm place **for at least 72 hours** (**not** in a microwave, oven etc.) with the battery compartment open and the keypad facing down (if applicable).
6   **Do not switch on the device again until it is completely dry.**

When it has fully dried out, you will normally be able to use it again.
